

# OTIC

## Four-door controller

### MAIN FEATURES

- Stand-alone and online operating mode
- 130 000 events, 40 000 IDs can be stored
- Up to 4 doors can be controlled
- Automatic network discovery
- Scheduled battery test if installed with Predor intelligent power supply
- 2 programmable inputs
- Programmable relay output
- Fire alarm and tamper inputs with advanced security level

### STAND-ALONE

The controller perfectly performs the access control tasks in stand-alone operating mode as well. The control unit stores the permissions, events and rules in its own memory, up to 40 000 IDs and 130 000 events.

### PROGRAMMABLE INPUTS AND OUTPUTS

The programmable inputs and outputs provide numerous applications. You can use them to control third party devices, for alert signal, for “do not disturb” and so on.

### BATTERY TESTING AND BATTERY FAULT SIGNAL

If the controller is used with Predor Fusion 5+1 power supply, the battery’s state of health is regularly checked for the highest security level and uninterrupted operation. The software interface shows notification in case of battery malfunction or quality deterioration.

### QUICK AND EASY CONFIGURATION

With the support of the automatic network discovery, the client automatically finds the controllers connected to the network. You can even do the pre-configuration of the system at home, you only have to upload the settings at the site.

### EASY INSTALLATION

The system creates exact wiring diagram (installation guide) for each controller panel corresponding to the current settings. It is exportable and printable. The assembling and cable connecting can be outsourced.

# OTIC

Free of charge software,  
outstanding price value ratio

- 40 000 IDs and 2000 users
